DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-6 and 15-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Uwazumi et al. (US 6770388).

Uwazumi et al. disclose a magnetic recording medium having a soft magnetic layer, a non-magnetic layer formed from Ti, and a perpendicular magnetic recording layer disposed on a substrate (col. 6, lines 49-66). The reference teaches that the thickness of the Ti layer (non-magnetic layer) is 10 nm. As shown in Figure 1, the soft magnetic layer has three portions: an upper portion corresponding to the claimed “soft magnetic dots” of claim 1 and the “arrayed projections” of claim 15, a lower portion corresponding to the claimed “soft magnetic underlayer” and a vertical connecting portion joining the two. With respect to claim 3, the examiner directs applicant’s attention to Figure 1 showing that the lower portions of the non-magnetic layer are “embedded” between adjacent soft magnetic “dots.”

3. Claims 1-6 and 15-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Kikitsu et al. (US 6602620).

Kikitsu et al. disclose a magnetic recording medium having a soft magnetic layer, a non-magnetic layer, and a perpendicular magnetic recording layer disposed on a substrate (see Fig 6; col. 13, line 23 to col. 14, line 50). The reference teaches that the thickness of the soft magnetic layer is a minimum of 10 nm. As shown in Figure 1, the soft magnetic layer has two portions: an upper portion corresponding to the claimed “soft magnetic dots” of claim 1 and the “arrayed projections” of claim 15 and a lower portion corresponding to the claimed “soft magnetic underlayer” wherein the two portions are in direct contact. With respect to claim 3, the examiner directs applicant’s attention to Figure 1 showing that the lower portions of the non-magnetic elements (figure no. 36) are “embedded” between adjacent soft magnetic “dots.”

Allowable Subject Matter

4. Claims 7-14 are allowable over the prior art which fails to teach the claimed structures having soft magnetic dots formed on the perpendicular magnetic recording layer (directly or via a non-magnetic layer).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6420058 and US 6841224 are cited as art of interest.
